

EXPLORERS ON THE MOON

Snowy!...D'you want to... Why, what's happened to me? Oh yes... the launching, and that frightful crushing sensation...I was well and truly knocked out.

Earth calling Moon-

Moon-Rocket calling Earth
...This is Tintin here.
I've just come round...
I'll go and see how the
others are.

I'm very well, thanks! But you aren't seriously trying to make me believe we're on the way to the Moon, are you?

Moon-Rocket to Earth...The Captain has just come round...Oh, and there's the Professor recovering...

Earth to Moon-Rocket ...You are now 2,500 miles from the Earth. Your course is exactly as estimated.

Two thousand five hundred miles from the Earth! Do you realise what an extraordinary adventure this is for us? ...It's unbelievable!...It makes one's head soil.

Well, my head's not spinning, anyway! This whole thing is nothing but hocus-pocus and jiggerypokery! You're just acting the... I mean ... You're trying to pull my leg again!

Plenty of time! ... My poor friends, the rocket left the Earth half an hour Ago. We are on our way to the Moon!

Ha! ha! ha! That's a

good one! Always ready

for a laugh, Professor!

Earth to Moon-Rocket ... You are now 5.000 miles from the Earth. Your velocity is 6.9 miles per second.

This., this is a joke, isn't it? ... You're just trying to frighten us? The launching really was fixed for 1.34? 1,34 a.m., yes! ... Not 1.34 p.m.

Yard! We thought it was 1.34 in the afternoon!

two Thompsons are on board. They decided to spend the night in the rocket, thinking the launching was at 1.34 in the afternoon,

oxygen supplies for four people; now we have six on board, not counting Snowy. Will our oxygen last out ?

You hear that, you brontosaurus? All this because at your age you don't know the difference between 1.34 a.m. and 1.34 p.m.

Blisterina barnacles! When I think that I was forbidden to smoke one single little pipe, on the pretext of saving oxygen-the very same oxygen you two come here and gulp down!... And stop Snivelling like that : you're making carbon dioxide!... Thundering typhoons, goodness knows why I don't chuck you overboard, without any more ado!

If we have to die, it's worth it to have seen this!

Yes, I expect so ... But personally, I'm in no hurry to die, if you don't mind!

It's a matter of opinion!.. Now

Moon-Rocket to Earth... This is Professor Calculus... I have taken over control...

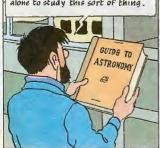

Blistering barnacles, that's enough moaning!... Now do me a favour and take yourselves off... I have important work to do!

And that's a fact! You need to be alone to study this sort of thing.

Earth to Moon-Rocket ... You have just attained a velocity of over 8 miles per second. You are no longer subject to normal gravitational pull.

Now then, here we

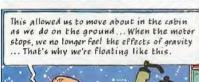

like that.

L-I-look, Snowy

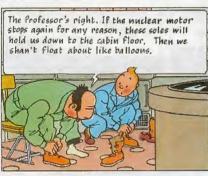

Moon-Rocket to Earth
... For some unknown
reason the outer door
has just opened. The
nuclear motor stopped
automatically. I'm going
to see why...

Here's the answer!... Read this note I just found on the table, on the deck below...

"I'm fed up with your rotten rocket! I'm going home to Marlinspike." Signed: Haddock. ... Goodness gracious, then it was he who... Has he gone mad?

Mad? No, I think he's just soaked himself in whisky. In any case, we must look for him. If you agree, I'll put on my space-suit and go out myself...

Hello, Professor...Tintin calling.
I can see the Captain. He's Floating about ten yards from the
rocket, going at the same speed
as ourselves. I'll do all I possibly
can to get him back on board.

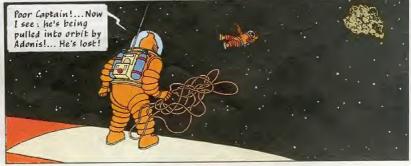

All right.

Me b-b-back on b-b-board your beastly flying cigar? N-n-never in my life! I'm off h-h-home to Marlinspike!

Not so fast! I have a plan: you raise the retractable ladder at once, so that I can anchor myself securely. Then, start up the motor: gently at first, but getting faster and faster...

It's sheer madness!...
But I admire you for wanting to try...!'Il raise the
retractable ladder as you
said, and wait for your
orders...

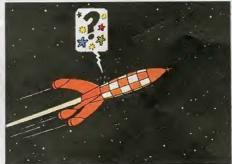

Tintin here... I'm securely anchored... You can start the motor...

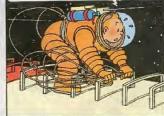

All right...I...Tintin, it's terribly risky...
But, good luck, any-way! Steady now: I'm starting the motor...

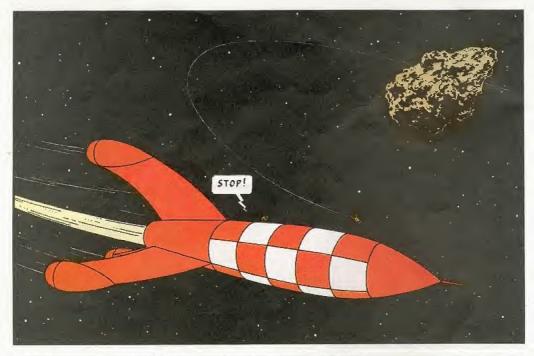

Tintin calling... I got a terrific jolt but I managed to hold on... You are right on course...

Yes, I can see the Captain... I'll close up to him. But for goodness' sake be quick. As soon as tho motor stops Adonis will start dragging us into orbit.

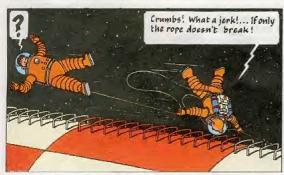

And we have put a safe distance between ourselves and Adonis! ... Now I'll stop the motor again...

W-w-w-what d'you think you're doing, eh? I'm quite old enough to d-d-do as I like!... I w-want to go home, so there!... I've had enough of this cake-walk, with whisky rolling up in a ball. We'll all end up smashed in little pieces!

Be quiet! Do you realise that all your tomfoolery has nearly cost us our lives?... Now we've had enough!... Get back inside at once!
... And try to behave yourself properly!... D'you understand?

For the time being, until your medicine takes effect, I'll cut this shock of hair for you. But first let's go below; it will be easier down there...

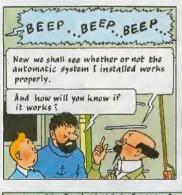

So now we're going to turn round... What's this latest acrobatic? Why not loop the-loop, or do a roll, or go into a spin, thundering typhoons?!...

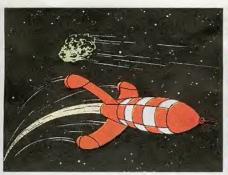

month marginant of

Swamper Environment y

Not only that! Far more serious!... [can tell you now : if my theories hadn't worked out. I'd have had to begin all my calculations over again.

And when anyone asks me later on: "What was your job in the rocket?" I'll say, "Me? I was the hairdresser!"

...it needs pruning-shears, ten thousand thundering typhoons, or a lawn-mower!

Go on, laugh! Laugh!... If you imagine you look more dignified than youresteemed friend, you've got another think coming!

And none of this would have happened, thundering typhoons, if you'd been able to tell the blistering difference between lp.m. and la.m.!

Well, what is it? His lordship isn't pleased?... What more do you want?... A shampoo and set?... Or would you rather I put it in curlers?

Earth to Moon-Rocket...You have three minutes to go before the turning operation.

I didn't get a chance to tell you about this manoeuvre... What do you think will happen if we go on heading for the Moon, with our rocket pointing directly at it?

We shall end up by arriving, 1 suppose

Of course, but like a missile. Travelling as we are, at such a terrific speed, we would crash on the Moon, and that would be the end of us all... Is that really what you want?

Listen!... There's only one thing I want, blistering barnacles! To be able to breathe God's good air, instead of air out of a bin!... And to smoke my pipe!... Thak's all I want!

Good! Now, what do we do to prevent ourselves crashing on the Moon?... Quite simply, we turn our rocket completely round, nose to tail. To do this, first we cut out the main motor, and start up an engine giving directional thrust... Once the rocket has turned round, the exhaust from our nuclear motor will brake our descent. If all goes well, this will allow us to land quite gently on the Moon... You follow me?...

In fact, if I understand you correctly, it's the same procedure as for launching, but exactly the other way round.

Earth to Moon-Rocket... Stand by... Two minutes to go before stopping the main motor,...

Get ready, everybody...And Captain, unless you want to start flapping about like a butterfly when the motor stops, hurry and put on your magnetic boots.

Oh Columbus! And my boots are down below!... Quick, I'll put them on...

Earth to Moon-Rocket... Stand by to start up the directional thrust... Ten seconds to go... nine... eight... seven... six... five ... four... three... two... one ... ZERO.

But whether they'il ever come back, that's another story!

1 ... er... don't understand ...

Sh! Top secret! ... You'll

Why ? ... Is it?

Earth to Moon-Rocket ... This is your present situation...You have another 88,000 miles to ao ... You are on the estimated course. You are gradually slowing down.

A little later ...

Earth to Moon-Rocket ... You have only 31,000 miles to go... In 40 minutes' time you should set the automatic pilot to land on the Moon at the selected place...

Moon-Rocket to Earth ... Right! We're just going to have a meal now. Then we'll prepare for the Moon-landing.

Yes, my friends, If all goes well, in half an hour's time our rocket will come to rest on the Moon, on the spot I have chosen almost beside the Sea of Nectar ... Thank you, Tintin.

The seaside?... Why, that's wonderful. .. It's ages since we went to the seaside, isn't it. Thompson?

It jolly well is! ... But I didn't know there was a seaside resort on the Moon ... Did you know that, Captain?

Of course! ... Everybody knows! ... I even heard that they need two Punch-and-Judy men on the pier. You'd fit the job perfectly.

"Lunar seas" was the ancient name for the dark patches astronomers saw on the Moon. We still use the names, like the Sea of Nectar and the Ocean of Storms. But you won't find a drop of water anywhere there.

The Moon is covered with high-walled depressions called craters. About 90,000 have been counted. Some are only a few hundred yards across. Others, like Bailly, measure 150 miles ...

Gracious! Craters are hot places inside volcanoes. We'll have to take care that the rocket doesn't fall into

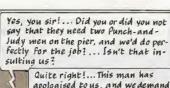

Don't worry; most lunar craters aren't live volcanoes. It's just the name given to them. As a matter of fact, we are going to land inside the crater Hipparchus, which is about 90 miles across.

No! no! a thousand times no! ... I'm not letting that pass!

Everyone to his bunk?... But

Professor, there are six of us.

and only four bunks ... Natur-

There are two spare mattresses:

Moon-Rocket to Earth...Right
... We are making final preparations...The frofessor is now setting the automatic pilot...

Blistering barnacles! You don't have to sleep, you prize purple jelly-fishes! You were told to lie down. That's all! So jump to it!

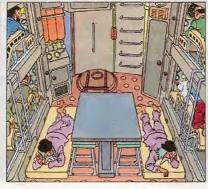

And get a move on, you dunder-headed Ethelreds!

Moon-Rocket to Earth ...
All's well. We are ready.
The automatic pilot is
set towards the middle
of the crater Hipparchus.
We're all lying on our
bunks, waiting.

Moon-Rocket to Earth
...The nuclear motor
has just stopped,
and the auxiliary
engine has taken over,

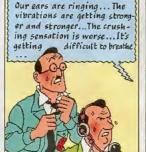

It's amazing!...It's tremendous!...It's incredible! Just think: in a few minutes'time, either we'll be walking on the Moon, or we'll all be dead. It's marvellous!

We're being crushed into our bunks...by an intolerable...weight ...can't move now...
The frofessor...blacked out ...I...think...

...my head ...will ...burst!
...My eyes ...1 ... I'm sure
...they'll pop...out of their
...sockets ...1 ... My heart
...Oh, my heart ...

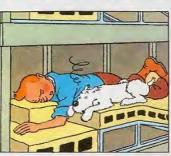

Something must be wrong... We've been calling them for more than half an hour, and still no answer ... Try again...

This is Cuthbert Calculus speaking to you from the Moon!!... Success!... Success!!... We're all safe and sound... We couldn't get through to you before; the radio was damaged. It must have been the vibrations that shook the rocket... Hello Earth... Did you get that?

Message received ...
But it sounds as if
the vibrations haven't
stopped yet: we can
hear strange rumbling
noises...

Now we are going to disembark from the rocket... The kobour has fallen to the youngest among us: we have chosen Tinkin to be the first human being to set foot on the Moon... He's just gone down to put on his equipment. He'll give you a direct account of his first impressions, so I'll hand you over to him... That's all

This is Tintin speaking. I've just put on my space-suit and am now standing in the airlock. They're just going to reduce the pressure to a vacuum inside here. Captain Haddock is in charge. I'm waiting for his final instructions.

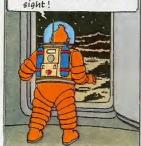

Oooh! What a fantastic sight!

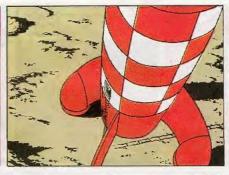

It's ... How can I describe it?... It's a nightmare land, a place of death, horrifying in its desolation ... Not a tree, not a flower, not a blade of grass. ... Not a bird, not a sound, not a cloud. In the inky black sky there are thousands of stars...

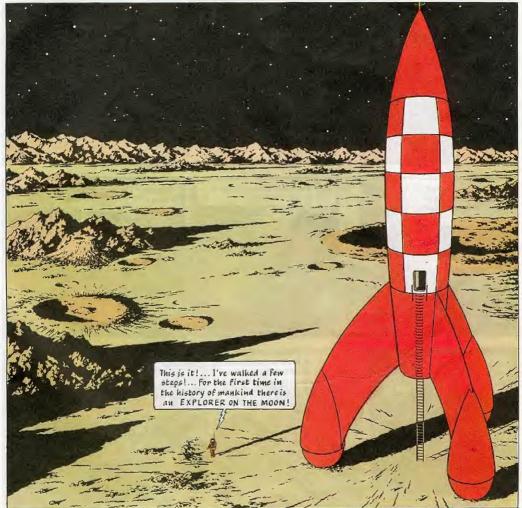

... but they are motionless, frozen; they don't twinkle in the may that makes them look so alive to us on Earth.

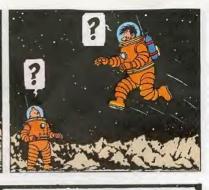

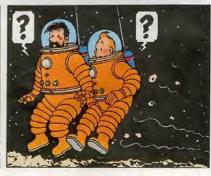

Naturally not. There's no air on the Moon, so there's no noise... And that's why the meteorite came down intact, too. Back at home, on the farth, the friction of the atmosphere would have made it white hot. So it would have disintegrated before reaching the ground, making what we generally call a "shooting star".

Anyway, if those tycoons on the lunar development corporation imagine that this sort of welcome will attract tourists to the Moon, they'll have to think again.

Ah, hello my friends!...This is incredible!... It's fantastic!... We're on the Moon! D'you realise that?

Just take a look there! ... A little bit closer, and you'd have been able to throw away our return tickets!.

Oh, so you think that's marvellous, do you? When we'd have been as flat as pancakes!

Exactly, blistering barnacles! But this isn't my occupation! Thundering typhoons, I'm a sailor!...And on board ship, at least you don't run the risk of bits of sky falling down all over the place, every time you bat an eyelid!

Still, that's not the point. We must set to work. Come along and unload the cargo. We must start at once. Wolff has already got everything prepared.

Good heavens, what's happening?...The ladder...The door...Captain, look!

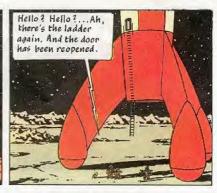

The ladder's retracted!...The door is shut!... What in the world does this mean?

Hello, Wolff?

Heilo, Wolff, hello? Blistering barnacles, what are you playing at up there? Hello, hello! ... Hello Wolff? Thundering typhoons, are you going to answer me?

You certainly gave us a fright, Wolff!
... We thought for a moment that the rocket was suddenly going to take off and return to Earth, leaving us stuck here in this delightful place!

I'm terribly sorry ... I ... Just a mis-

Never mind, forget about it!... Now Wolff, we're going to discharge the cargo. The Captain's coming up to help you get the crates out of the holds. Tintin and I will stay down here.

It's quite a simple job. Each crate is bound with steel wires connected to a central ring. You only have to slip the ring over the hook on the pullcy-block.

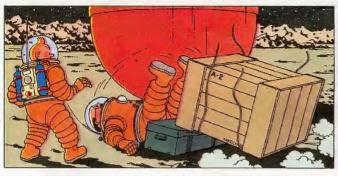

There... As far as the cargo's concerned, we'll soon have finished. But we've still got to unload the reconnaissance tank.

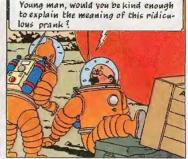

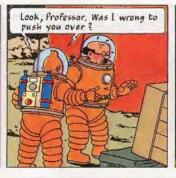

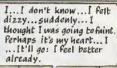

Don't worry, Wolff; probably it's only fatigue. And perhaps your oxygen supply is badly adjusted. Go and lie down. In fact, we'll all follow suit.

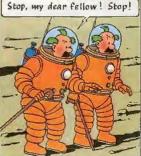

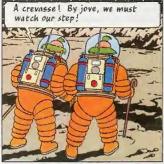

Moon-Rocket to Earth. We've just come back on board for a bit of a rest. Meanwhile the two detectives have gone out to have a turn at exploring.

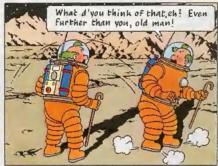

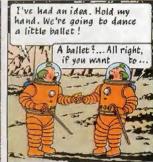

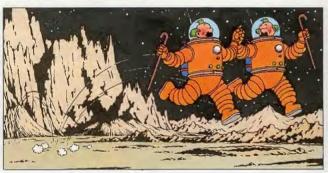

You talk as if we were in a busy street... But there aren't any people on the Moon, my poor friend!

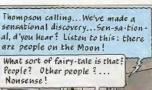

And how do they know there's no one here if no one's ever been?

They can't be made by ONE of us: there are TWO sets of Footsteps!

Quite right!

Then they're footsteps made by two of us, nitwit!... I expect you've gone back on your tracks, and those are your own footmarks!

Alone!...You're alone, all right... in a class by yourselves, you Bashi-bazouks! You come back here, and get a move on! You've only enough oxygen for another half-hour, anyway.

All right, all right, we're coming... Since you despise our scientific contributions...

Perhaps it's silly, but I wonder...Those footsteps they saw...What if there are other men on the Moon? D'you think that's absolutely impossible?

Impossible ?... Theoretically, no. If we were able to get here, then others could too. But as far as I'm concerned, I'm certain we are the first- and the only people - to land on the Moon.

A few minutes later ...

Gentlemen, our plan was to stay on the Moon for a whole lunar day - that's equivalent to fourteen terrestrial days. But our oxygen supplies were intended for four people and one dog, and not for six people, which is our present number. So we shall have to restrict our stay to six days.

We must therefore hasten our work. While Wolff and I set up our observational instruments. Tintin and the Captain will unload the compounts of our reconnaissance tank and assemble it. Is that agreed? Right then, gentlemen, let's get to work!

EXTRACT FROM THE LOG BOOK BY PROFESSOR CALCULUS

3 rd June - 2345 km, (9. M.T.) unloading of cargo completed. Wolff and I have started to install the observatory, Ceased work at 2200 hot. Captain Hoddock and Tintin have begun assembling the

4th June-0830 hrs. Operations commenced at 0400 hrs (5.4. T.). Telescope mounted. Cameroo in position. Theodolite in working order.

Observe away, my friends. You do that! Your discoveries will be vastly interestina .. TO US! Ha! ha! ha! ha!

EXTRACT FROM THE LOG BOOK BY PROFESSOR CALCULUS

4th June - 2150 hrs. (9. M. J.). wolf and I spent the day studying cosmic rays, and making astronomical observations. Our findings have been entered progressively in Special Record Books Nos. I and II. The Captain and Zintin have nearly finished assembling the tank 5th. June - 1920 hrs. (4. M. J.). Half an hour ago the Captain and Tintin pronounced the tank ready for use.

He has just secured the hatch. Now they are filling the insulated cabin with air. When this is done they can remove their spacesuits: then Tintin will take the controls and the Captain will act as lookout.

Ah, there's Tintin's head showing through the multiplex cockpit cover. He's smiling at me and signalling that everything's in order.

And there's the Captain. Like Tintin, he's signalling to us that all's well. He's wearing his head-phones and ...

Hello, Haddock calling ... Ready for departure ... Hello there, Tintin, weigh the anchor!

Great snakes! A crevasse!... Stop!

Crumbs! That was a near thing! A few more inches

Blistering barnacles, it's a mere detail that I cracked my head against that cover again!... But we've had enough! We're going home! We know now that the tank goes well... and that crash helmets are indispensable!

I agree 1'll reverse, and we'll go back to Base.

EXTRACT FROM THE LOG BOOK BY PROFESSOR CALCULUS

6 th June - 1340 bers. (6.M. J.)
This is a day that will go
down in the anneals of Science.
We have succeeded in making
direct measurement of the constant of solar radiation, and
facing exactly the limit of the
solar appointm in the ultaviolet. An hour ago, at 1235
proceety, Wolff, the Capain,
Jintin and Snowy at off on a
reconsuccent life in the Cark,
Downdo the creter Ptolemacus.

Quick, Captain. Hold

I saw something move. I'm

Into the hands of Fate!

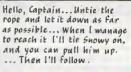

No,I can't see it. Do please hurry!

Blistering barnacles, what's up? The rope's somehow got shorter than it was just now.

Oh! ... I can't feel the

weight of the stone any long.

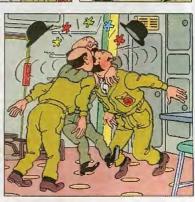

Wolff here...still no sign. It's more than half an hour since they went into the cave. I'm beginning to wonder if... Ah, there they are!

Tank calling Base. The Captain and Tintin are back on board.
The Captain's taken over command as Tintin is completely exhaust ed. We're returning post-

Aha! I have a feeling that Operation Mysses is entering a decisive phase. We're going to have some fun!

Moon-Rocket calling...
Tintin here. Good luck
and good hunting!...
And don't leave us
alone for too long!

Calculus here... Don't worry, Tintin.
We'll be back in forty- eight hours.

I don't know why, by thunder,
but something tells me it would
be wiser to turn back!

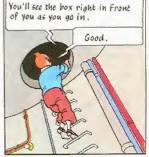

Er ... nothing much. [

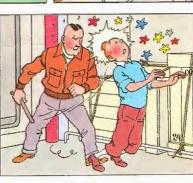

forgot to bring any tinned

No, no, don't worry, I've just... put him to sleep! And now, Wolff, back we go to Earth.

What?... What do you mean? Without waiting for the others?

Without waiting for the others - of course! Tell me: how soom can the rocket be ready for take-off?

No, we can't do that!...
Marooning them on the Moon
will condemn them to a
hideous death. It would be
an atrocious crime!

Tut-tut! Cut out the fine words, my dear Wolff! And cut out the noble scutiments, too! We're leaving, and that's that!

No! I refuse to do it! I won't be a party to such a monstrous deed!

My dear Wolff, listen to me! Supposing we wait for the others to come back, and overpower them one by one as they leave the air-lock. Right... Then, we set off for the Earth with our prisoners... But the oxygen... what about the oxygen, eh Wolff?

Supplies were provided for four people: we are seven. So! It's too easy: we'll all be dead before the end of the journey. Is that what you want?... Well! Answerme!... Good... Now you're seeing sense!... Come with me. We'll go up and prepare for departure.

Ah, here's Tintin coming for up again.

Hello, Tintin...Tank calling... What's all that hullabaloo?

Hello, Wolff here ... I

... er... It's nothing.

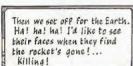

So that's that! And now, my friend, you're going to cook me a nice hot meal. For eight days I've been living on dry sandwiches, and I've had enough of them! So get moving!... And don't waste any time!

Is that food

coming. Wolff?

We've had a breakdown. The motor batteries are flat.
A short-circuit, I expect.
The Captain is just connecting the small emergency batteries, so that we can get back to Base.

be prepared for at least half an hour.

I don't understand at all.
I... Why, what's that humming noise? Good heavens!
It's the motor... But then...
then... the rocket's going
to take off...

But where are the others? Prisoners like myself? But come to think of it... Poor devils! They went off in the tank... Are they going to be left on the Moon? Wolff! Wolff!

Tank calling Base... We're returning at reduced speed. We can see the rocket... Can you hear me?...

How odd. The ladder has retracted. And the door is closed. What can be the meaning of that?

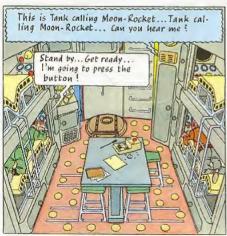

I tell you, there's something fishy going on inside that thundering rocket!

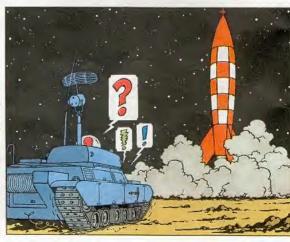

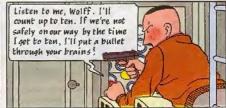

Yes, me!... Did I disturb you? I do bea your pardon. [really should have knocked before I came in . Now get up, both of you, and out up your hands!

It's a small world, isn't it, Colonel

Boris ? ... You haven't changed much since

By the way, you accused poor Wolff of having sabotaged the launching gear. I'm sorry to disillusion vou: I was the culprit.

Billions of blue blistering barnacles! Where did this jack-pudding come from? Off the Moon?

No, out of the hold, where

he was hiding-thanks

to the treachery of our

friend Wolff, Will you

Ah, there you are at last, Professor Calculus. Do come in. This aentle man is so anxious to make your acquaintance.

So you prevented me from smoking my poor little pipe, Wolff, just to let this thundering Bashi-Bazouk have his ration of oxygen?

You may as well know at once that it's a waste of time questioning me. I'm not talkina! You'd better interrogate Wolff: he'll be only too happy to spill the beans, the wood-louse!

In heaven's name, Wolff, what's the meaning of this? What's going on!... I can't make it out ... It's all a misunderstanding, isn't it?... Come along, Wolff, tell me. Explain yourself.

I'm afraid you're right. I saw him lying unconscious a few minutes ago. But there was other urgent work to be done. I'll carry him up to the cabin.

You hear that, you unfeeling monsters?... Vivisectionists!...Torturers!...Cannibals!

Anyway, who says that his leg's broken? Wait a minute; I'm going to have a look at it for myself.

Now then, Snowy boy. Captain Haddock's going to examine you... There... Let's see your paw... Poes that hurt? No, not at all, ch?

I...er...you see: I have a way with animals ... It's one of my strong points. But I wonder if it wouldn't be better...

A few minutes later...

There we are, Snowy. A few days rest, and you'll be fine.

Now then, back to these gentlemen. We're waiting for your explanation, Wolff.

Three years ago I was working in America at the rocket proving ground at White Sands. None of this would have occurred if I'd not had a passion for gambling... I got into debt...Then one day, in New York, a man approached me. He said he knew my situation, and was ready to settle my debts in exchange for a little harmless information...

... about the nuclear research I was engaged on .
But little by little he put pressure on me to reveal real secrets. At first, I refused. But my creditors were hounding me. I was trapped... Finally I gave in... A spy - that's what I had become. But one day I rebelled. I wanted to become an honest man again, and I fled to Europe... In the end I came to Syldavia, where I heard they were building an atomic centre. I got a job there.

When you arrived in Sprodj I was happy, and had forgotten the whole business. Then one day I received a message. They had picked up my trail; they ordered me to furnish them with complete details of the experimental rocket we were just finishing. Otherwise my past would be revealed. Heartstricken, I surrendered.

So it was you who betrayed all the plans, and all the radio- control data!

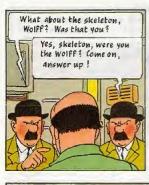

Then it was you who nearly stove my head in, too, when I was Iying in wait in the corridor at the Centre. Well, you'll pay for that all right!

One moment, Captain. We too have a question to ask the prisoner.

Well, thanks to Tintin, your enemies didn't succeed in capturing the trial rocket : you blew it up in flight. But they believed that it was I who betraved them, and they threatened to kill me. Then they learned that this rocket was under construction, and they gave me fresh orders ... One of the crates coming from Oberköchen would be faked, and would conceal a journalist. My part would be simply to facilitate his

And you believed a fairy-tale like that? You two-Fared traitor! A cock-and-bull story! It would make a cat laugh!

> Er ... they said he'd reveal his presence once the rocket reached the Moon.

Then, soon after our arrival here, I took advantage of your absence to let him out of his hiding place. It was Jorgen . He divulged his real objective: to capture the rocket and take it back, not to Sprodj, but to the country for which he works.

Two more points, Wolff... The ladder being retracted ... and the crate that nearly squashed us: was that You ?

> Yes! ... And when you were just behind me pretending to have an attack of dizziness. you meant to push me out into space, eh, gangster?

And I trusted you implicitly ... Oh! Wolff !...

Well, go on.

Yes out with t. Judas!

Today, when lintin was alone on board and the rest of you had departed for forty-eight hours, the Colonel decided to act. At the given moment, Tintin went down into the hold ...

Er... ves ... I stayed here, and it was he who knocked out Tintin. It was only afterwards that he told me of his plan to abandon you on the Moon. I tried to stop him. I swear [did!

Saved?... Ah, my poor friends,

I only hope that you are not

rejoicing too soon!

I believe you. This is what happened then ... When I came round I was in the hold, trussed up like a chicken ... I heard the humming of the motor, and realised what was going on ... Luckily for us, these two worthy characters were never Boy Scouts!

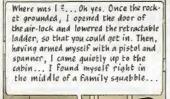

I mean that they don't know how to tie a knot! So I managed to get rid of my ropes without too much difficulty. And none too soon! The engine was just starting. As the rocket was rising, I severed all the leads. The motor stopped immediately, and the rocket fell back to the ground ...

Undoubtedly by cutting the leads Tintin averted disaster... for the time being. Alas, it is only too likely that in falling, the rocket suffered serious damage. And this will probably take time to repair. Meanwhile, there's still the grave problem of the oxygen... But let's hear the rest of your story, Tintin.

This thug accused Wolff of sabotaging the launching gear, and was going to shoot him. My spanner knocked his gun out of his hand. Just in time, wasn't it, my dear Jorgen... as it seems that you are no longer Colonel Boris.

Oh yes, we met in Syldavia, over that business of King Ottokar's Sceptre. Under the name of Boris, he was aide de camp to King Muskar XII, whom he shamefully betrayed. I won the first round, but for a while he seemed to be winning the second...

And now we'll dump these two

We must be more chivalrous than they were, Captain... Now, you're the expert, so take them below and tie them up securely.

Anyway, my little lambs, I'm going to knit you lovely

little rope waist coats to keep you nice and warm!

Hand-made, by thunder!

Guaranteed absolutely

perfect!

Do what you like with me. But please be kind enough to stop spluttering in my face-it's wet!

What?...Me!...Wet?...Blistering barnacles,you dare... A man of spirit like me! To hear myself insulted, by this creature, this Bashi-bazouk!

Calm down ? Calm down?...But you heard him, this little black-beetle! Daring to make out that I'm wet! Calm down!

Moon-Rocket calling Earth. There have been extremely serious developments here... A traitor, in the service of some unknown Power, was secretely smuggled aboard the rocket.

... Wolff was his accomplice... Yes, Wolff!... Today they went into action and tried to seize control of the rocket. Fortunately we have managed to overpower them, and put a stop to their mischief...

There! If you succeed in getting yourselves undone, blistering barnacles, I'll sign the pledge and drink nothing but water for the rest of my days!

I've just made a superficial inspection of the damage to the rocket. My preliminary estimate is that it will take us at least a hundred hours to effect the necessary repairs.

To that must be added the time for our return journey. We have oxygen supplies for a hundred hours at the most, which means that having used our last resources to re-launch the rocket, we shall run the risk of arriving on Earth as corpses.

ferhaps! But meanwhile we're still very much alive. And we'll start work at once. At all costs we must get everything finished in the shortest possible time!

Moon-Rocket to Earth, We're going to begin the repair work. Give us some music: it will keep up our morale.

Earth to Moon-Rocket. We'll switch on Radio-Klow for you, Keep your spirits up!

Come on, come on, cry-babies! Towork!
And none of those gloomy thoughts.
We're going to have some music. Thundering typhoons, there's nothing like a bit of music to cheer you up!

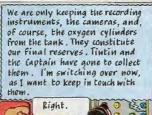

The time passes... Slowly, the lunar night falls on the devolate landscape...

Moon-Rocket to Earth ... The work is well ahead. Barring accidents, we shall have finished by midday ... However, we are having to abandon the tank and the optical instruments on the Moon. To dismantle them and then reload them would take too long, in view of the little oxygen remaining.

All right, thanks. But the sun has completely vanished. Only the mountain-tops are still glowing on the horizon

But it's not preventing us from seeing, as there's a Pom Pom Pom & F And they danced & wonderful light from the Earth. by the I light of I the Earth ?

We have left a message sealed inside the tank for those who may one day follow in our steps. If we are lost with all hands, this message will be a reminder of the fantastic adventures of the first men on the Moon. Now we are coming back on board.

advise you to lie down, to save oxygen. But before doing that, Captain, would you go to the hold and make the prisoners lie down as well, so that they won't suffer too much.

Keeping them is crazy enough! But to coddle them like babes in arms

... blistering barnacles. that's the limit! Still, I'll 90.

Thirty seconds to go... Twenty seconds to go ... Ten seconds to go ... nine ... eight ... seven ... six ... Five ... Four ... three ... two ... one ... ZERO!

And just for a change, blistering barnacles, we're going to pass out!

And upon the shadowy world a few footsteps remain, the only trace of the first EXPLORERS ON THE MOON.

They're on their way! The only thing that matters now is that they should have enough oxygen...But whateverhappens, everything must be prepared for landing.

Is that the landing site? Giovanni?
... Baxter here... If all goes well, the
rocket will be here later today. Make
surg everything's ready for their
arrival; fire engines, ambulances...
And get some electric saws ready,
too, in case they haven't the strength
to open
the doors themselves.

oo, in case they haven't the streng to open the doors themselves That's all for the moment. I say, Mr. Baxter, there's something wrong! Look; the rocket is deviating from the correct line of flight. I wonder what's happening...

By Jupiter! You're right! Perhaps the steering gear was damaged by the fall... Or else their gyroscopes have been put out of order... It's imperative that they correct their course... (all them, Walter!

This is Earth calling Moon-Rocket... Earth calling Moon-Rocket ... Are you receiving me?...

No reply!...And they're getting further and further away! The poor devils! They're going to their death!

Earth to Moon-Rocket. Correct your line of flight at once : you are completely off course.

Ah! That's done it. thank goodness!

Earth to Moon-Rocket ... Well done! You're doing fine

Good. We can ao below. That was a near thing!

And now that traitor Wolff isn't here to be such a kill-joy, we'll just cheer ourselves up. Let's have a drink all round ... Tintin ? ... Professor?

But that's enough talk! Gentlemen:
you know the position. There is n't
enough oxygen to go round. There
are too many of us here. You spared
my life: but I'm not going to spare
yours!

Will you get out!...Let go!...Let go of that, you fool!

Hold him, Wolff!

Moon-Rocket to Earth... Calculus here... [... It's terrible... Jorgen managed to free himself... He wanted to kill us... and Wolff intervened... There was a fight... Jorgen had a qun in his hand... and in the struggle it went off... Jorgen was shot right through the heart.

... I didn't mean to ... He

What!! This interplanetary-pirate! This freshwater-spaceman! Let him go free! Then, at the first opportunity this snake can... can stab us in the back! Into the hold with him, blistering barnacles! Into the hold, and in irons!

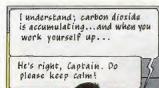

But ... 1 ...

What's ... what's

the matter

with me?

Don't worry, nothing will happen. I'll answer forhim. Now, it will be better to lie on our bunks: in that way we'll save oxygen. But first of all we must go and release the two detectives... And what shall we do about Jorgen's body?...

The only answer is to leave it in space.

Earth to Moon - Rocket... Here is your latest position... You are now 31,000 miles from your point of departure... How are things going on board?

Moon-Rocket to Earth... The carbon

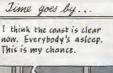

dioxide is getting worse and worse.

The others are dozing on their bunks. I'm having to struggle to keep myself from falling asleep.

Earth to Moon-Rocket ... Don't struggle, Tintin. Go to sleep. We'll wake you up when it's time for the turning operation.

Ssh! Not so loud!...1'm going below, to the hold to...er... I think there's another cylinder of oxygen down there.

I had to ask, you see. The Captain partic ularly told me togive him details of every single move you made.

It's incredible...He hasn't given the alarm... Fate is on my side: I shall succeed!

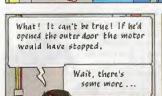

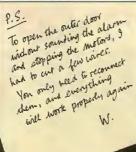

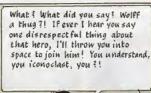

Ten thousand thundering typhoons! He has gone out into space to save our lives!...
And I accused him...

Yes, Captain. But even so, perhaps his sacrifice will be in vain...
You go on up. I'll just repair these wires...

Earth to Moon-Rocket... Stand by... Ten minutes to go before the turning operation.

A quarter of an hour later ...

Earth to Moon-Rocket... Turning operation successfully accomplished. Don't give in! In less than two hours you will be back on the Earth.

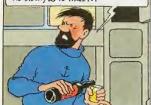

Yes!... And they'll give us an impressive memorial! I can see it from here! To Captain Haddock, a martyr in the cause of Science, etcetera, etcetera!

What am I going to do? Thundering typhoons, I'm going to empty this bottle of whisky! Alcohol is a poison that kills slowly, they say... As slowly as it likes...

take its time. I'm in

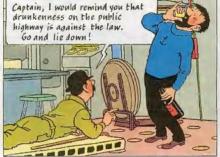

That's enough, Cap-

tain! Go and lie

Blistering barnacles, why not? Was I or was I not told that the spirits on board were reserved for an emergency? Well, wasn't I?...

It's a thousand to one that we'regoing to end up as a crate of kippers!
Ten thousand thundering typhoons, isn't that an emergency?!

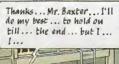

Moon Rocket to Earth...The air's becoming unbreathable
... The last cylinder from the space-suits has been used up... The others are already unconscious...I wonder if we can possibly get back alive.

This is Baxter... Hang on, Tintin! You have only about fifty thousand miles to go... just about another hour. Courage, Tintin! Don't lose heart!... All will be well!

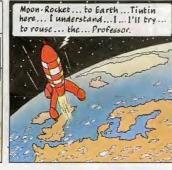

I'm afraid ... [... shan't have... the strength... Goodbye!...Goodbye! Goodbye! Yes, it's goodbye!
May you all perish up there!
Jorgen and Wolff bungled
their work. We shall not
get your accursed rocket...
Well, may you go to the devil
in it!...

For nearly an hour the rocket hurles on towards the Larth.

Earth to Moon-Rocket... Stand by ...
You have only about 8,000 miles
to go... Get ready to set the automatic pilot...

Professor! For goodness' sake!... Professor please ... It... It's no good... I can't rouse him... Now what's to be done?

Earth to Moon-Rocket...
Earth to Moon-Rocket...
Hurry up and set the automatic pilot...Earth to Moon-Rocket...Can you hear me?

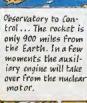

He must have fainted again ...
Never mind, he's done the
essential thing... I'll dash over
to the landing site now.

Right. We'll
keep in touch
with you by radio.

Great Scott!...The auxiliary engine hasn't started

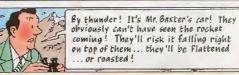

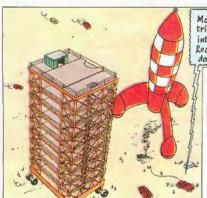

Moon-Rocket... The gantries are being moved into position... Moon-Rocket, I repeat, open the door!

No answer... We must cut open the hull... Bring the electric saws.

Professor! ... Here

Take them into the fresh air at once, and give them oxygen!...Hurry! ...''Il take care of Tintin: he must be up in the control cabin...

Safe and sound...Back on Earth?... On Earth?...Is it really true...But the others?... And Snowy?

The Professor and the detectives are out of danger. So is Snowy... But...

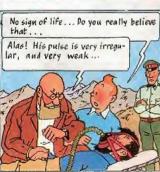

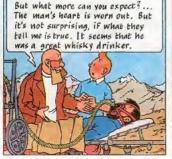

Captain!... Captain!... It's me,
Tintin... Please, please wake
up!... We're back home...
Captain! Captain!

A glass for me too, Captain, I want to drink a toast with you! It's the first time in my life I have tasted this beverage. But this is not the moment to drink camomile tea!

My friends, we have just lived through the greatest epic of all time: the marks of our feet are inscribed upon the surface of the Moon. And shall we let the dust of centuries hide those glorious marks for ever, gentlemen?

No, that will never be! For I promise you that we shall return there!

May I be turned into a bollard, Blistering barnacles, if I so much as set foot in your flying coffin again! Never, d'you hear? You interplanetary goat, you! Never!!

THE END
